PROFILE

Dedicated student of Software Engineering, with hands-on knowledge of Full-Stack real time application design and implementation using Node.js/WebSockets, database modeling (SQL Server) using RDBMS, C++ object Oriented programming and strong software architecture (UML) skills. Proactive, with an eagerness to solve challenging problems using skills gained through practice.

ACADEMIC PROJECTS

- Real-Time inDrive Clone (Full-Stack): Built a ride-sharing portal using Node.js, Express.js, and JS. Integrated Socket.io for live bidding and handled sessions via localStorage.
- WhatsApp Management System: Designed 12 UML diagrams (Class, Use Case, ERD) and developed a complete structural messaging framework in C++ using OOP.
- AI Flood Warning System: Handled full SDLC from requirements gathering to engineering a normalized (1NF-3NF) relational database backend for real-time routing.
- Smart Home Device Controller: Created a modular, memory-efficient C++ console application for appliance automation utilizing core OOP (Inheritance & Polymorphism).
- Bank Management System: Developed a secure transaction and account management console application using C++ File Handling for structured data persistence.
- ICT Branding Project: Created corporate logos, brochures, and promotional layouts applying digital branding matrices and modern UI/UX design standards.
